## How to Disable the Block Editor in WordPress Disable (Gutenberg)

#### Disable the Block Editor (Gutenberg) with the Classic Editor Plugin

One way you can revert to the text editor is by downloading and installing the Classic Editor plugin. It's a free plugin that is endorsed by the WordPress Core team.

This plugin restores the original text editor. The great thing about this plugin is that it gives you the flexibility to edit your content with both the text editor and with the Gutenberg editor.

If you would like to set the traditional text editor as your default editor, go to Settings > Writing.

You will see an option that says: "Default editor for all users".

Next, select Classic Editor and save your settings.

Once you save it, the Classic Editor will be your default editor fall your pages and posts.

If you have someone on your team that prefers the blocks, you can easily change your text editor. First go to Posts (or go to Pages if you're creating/editing a post). After you select Posts, you'll see a list of all of your posts.

When you hover your mouse over a post title you'll see the post's name and the name of the text editor it was created with. From here, you can select a different editor

Select the editor you would like to use and the backend of the post will appear with the editor you've selected. Enter your desired text and save.

#### Disable the Block Editor (Gutenberg), with Code

You can also disable Gutenberg with code. Simply add this code to vour functions.php file: add\_filter('use\_block\_editor\_for\_post', '\_\_return\_false');

Control	The7 database update complete. Thank you for updating to the latest version?

If this code has not been added correctly, this can break your site. If you're not comfortable with code, it's best that you use one of the plugins mentioned earlier in this tutorial. Another alternative is to use the Code Snippet plugin. Adding a code snippet allows you to add code without altering your functions.php.

After you install and activate the plugin, go to **Snippets > Add New**. Name you snippet and add this code:

add\_filter('use\_block\_editor\_for\_post', '\_\_return\_false');

Choose "Only run in administration area" and click on "Save Changes and Activate."

It is important to note that disabling Gutenberg, (the block editor) is only a temporary solution.

While the WordPress team has officially stated that they will support the classic editor plugin for another couple of years, eventually the block editor will be the standard for editing in WordPress.

In order to learn about how to use Gutenberg, you can take our Block
